

## Home & Office Centration Chart

### Recommended Fitting Height

Minimum Fitting Height : 16 mm

### Ordering Nikon Home & Office

Nikon Home & Office can be ordered like a progressive lens. Each lens is based on the patient's own reading power, (no degression) so there is nothing to calculate.

Simply provide the following:

- Far monocular PD
- Add power
- Distance prescription
- Fitting height

### Why a Patient Should be Recommended Nikon Home & Office

- Requires comfortable and wide intermediate vision
- Experiences visual discomfort in mid-range distance
- Uses various electronic devices at different distances
- Needs an ideal complement to progressive lenses

### Ideal Lens for the Following Patients

Office workers, people working from home, physicians, surgeons, dentists, chefs, hairdressers, musicians, customer service agents, architects, accountants, seamstresses, artists, assembly line workers, electricians, air traffic controllers, technicians, etc., in other words all who use intermediate vision indoors.

Even if a small portion of the lens is devoted to far vision, Nikon Home & Office should not be worn for any far vision activity (e.g. driving).

2016-06 (NOUS-01) NKHO

## COMFORTABLE INDOOR VISION

Sharp vision from near to a few meters.

90% of our time is spent indoors. Specifically designed for that purpose, Nikon Home & Office is the perfect solution for patients who spend long hours indoors.

Comfortable Indoor  
Digital Lens
